EDUCATION

University of Alabama

B.S. Computer Science, Minor in Mathematics, Concentration in Cybersecurity

Tuscaloosa, AL

August 2022 - May 2025

- GPA: 4.21/4.00
- Honors: National Merit Scholar, President's List, ACT 36
- Relevant Courses: Data Structures & Algorithms, Software Engineering, Operating Systems, Microcomputers

University of British Columbia

Non-Degree Computer Science

Vancouver, BC

May 2023 - July 2023

Oregon State University

Non-Degree Computer Science

Corvallis, OR

July 2023 - August 2023

PROJECTS

CNN-based Pizza Identifier | *Python, TensorFlow, S3, SageMaker*

- Engineered a CNN-based Pizza Identifier using TensorFlow, capable of classifying images as “pizza” or “non-pizza”
- Utilized Amazon S3 to store and access the dataset, ensuring efficient data management during model training
- Implemented Amazon SageMaker for real-time model training, deployment, and API-based predictions
- Improved classifier accuracy by fine-tuning the CNN model, optimizing its performance with limited training data

University Course Scraper Bot | *Python, Discord API, EC2, CodeDeploy, Git*

- Developed a Python-based web scraper designed to strip complex data from a University course website
- Integrated the scraper into a Discord bot using the Discord API and made it responsive to user input
- Deployed the Discord bot on an AWS EC2 instance in order to create continuous operation
- Established an update supply chain by connecting the Git repository to EC2 using CodeDeploy

AWS-backed Email Gateway | *Ruby on Rails, API Gateway, Lambda, SES*

- Leveraged AWS Lambda to create a server-less environment, reducing operational costs
- Integrated a service trigger using a POST-only REST API via API Gateway
- Utilized Ruby on Rails to process information received through the API and prepare it for sending
- Established Amazon SES integration with Lambda, allowing for efficient delivery of the processed data

Investment Simulation App | *Python, Qt6, MySQL, Alpha Vantage API, Git*

- Crafted a portfolio simulator app using Python and the Qt6 framework, simulating real investments
- Implemented a MySQL database that kept track of user investments and data via an account system
- Incorporated a public API to provide real-time company price and information, enhancing market insights
- Employed multithreading for seamless real-time updates, enhancing user experience during active app usage

LEADERSHIP

UA CTF Cybersecurity Staff

- Engineered challenges in various cybersecurity fields, empowering critical thinking among high school students
- Offered real-time support to virtual participants, enabling success in complex cybersecurity challenges

Alabama Robotics Competition Staff

- Efficiently coordinated logistics, enabling engaging student demonstrations with home-designed robots
- Impartially assessed each demonstration, providing valuable feedback to encourage student success in robotics

TECHNICAL SKILLS

Languages: C/C++, Python, SQL, JavaScript, Ruby, HTML, CSS, VHDL, MATLAB

Technologies: AWS Cloud Platform, MySQL, Git, Qt, TensorFlow, RESTful API

CERTIFICATIONS

AWS Certified Cloud Practitioner (CLF-C01)

November 2022
